- Raw, UnEdited Field Service Product Demonstration Videos.
- Field Service Test Results With Productive Feedback.
- Assist In Product Availability For New Products On The Market By Having Access To Warehouse Storage
- And Much, Much More.

AquaBond®

AquaBond manufactures professional two-part adhesive and sealant systems for the pool, fountain and spa industry. Our adhesives are all packaged in easy-to-apply, multi-use cartridge systems. Each unit consists of a manual or pneumatic dispensing gun, a cartridge and a static mixer, all designed to work as an integrated high-performance system. There are hundreds of uses for our adhesives in pool & spa construction and maintenance, such as, cracked concrete, patching vinyl pool liners, leaks around light rings, skimmers, main drains and return lines, attaching pool tile, fixing leaks in pool hose, pumps, stainless steel filters and encapsulating the #8 green wire in pool light niches with our UL listed compound even underwater and wet area repairs. AquaBond has a solution for every problem "Wet or Dry"

NEW! AquaStitch

AquaStitch from AquaBond is a revolutionary concrete crack repair system designed to permanently stabilize and repair structural cracks in concrete, gunite and shotcrete swimming pools and pool decks. Not just simple staples... AquaStitch mechanical stitches give cracked pool concrete a long-lasting repair that's both mechanically AND structurally sound!

Why AquaStitch Is The Best Pool Crack Repair Method:

AquaStitch combines unique, specially-machined mechanical stitches with AquaBond's non-sag Concrete Repair Compound CR-2100-250, a high-strength, two-part structural epoxy. The stitches and repair compound work together to provide incredible load transfer and resistance against the structural pool crack growing larger.

The result? An amazing combination of strength and huge savings in both installation time and cost when compared to other repair methods for cracked concrete swimming pools and pool decks!

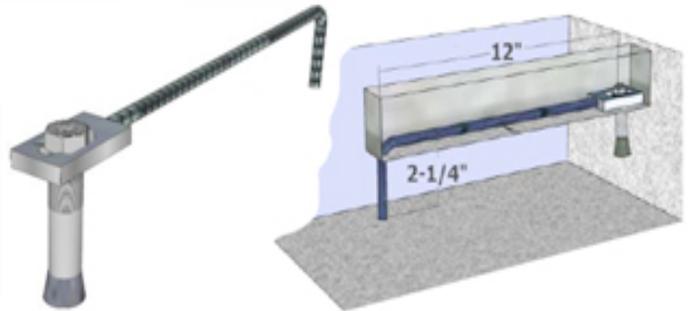

How Our Concrete Crack Repair Stitches Work:

The precision-engineered AquaStitch anchoring mechanism consists of a threaded stud with an outwardly flared cone-shaped end. Tightening the nut against the specially-machined end plate compresses the stud and its sleeve, wedging it firmly outward into the concrete base material.

Placed every 12 inches along the length of the fracture, these stitches transfer the load away from the crack, producing tension across the crack and inhibiting it from expanding.

Key Features:

- Repairs structural cracks in concrete, gunite and shotcrete swimming pools and pool decks
- Engineer-designed and field-proven
- Performs better than any other swimming pool crack repair method
- Simple installation
- No special tools required
- Works on flat or outwardly curved surfaces
- Inhibits cement pool cracks from expanding further
- Stitches are hot-dip galvanized to prevent corrosion
- Guaranteed against manufacturer defects
- Excellent technical support

**Permanently Stabilizes and Repairs
Structural Cracks in Concrete Swimming
Pools, Walls and Pool Decks!**

The BEST performing system — period!
